

87 CRM SILAGE & GRAIN

DKC 37-12 is a proven Dekalb bred product that has shown outstanding ability in independent trials. Based on the results of these trials and the data submitted by Crop and Food from their replicated trials in 2006, DKC 37-12 has complemented the portfolio of hybrids offered by Pacific Seeds. The limited commercial release last season reinforced the potential of DKC 37-12 as a preferred option where the requirements are for a short season hybrid.

With fast establishment DKC 37-12 provides consistent performance across environments and management practices. It also provides good stalk and root quality.

DKC 37-12

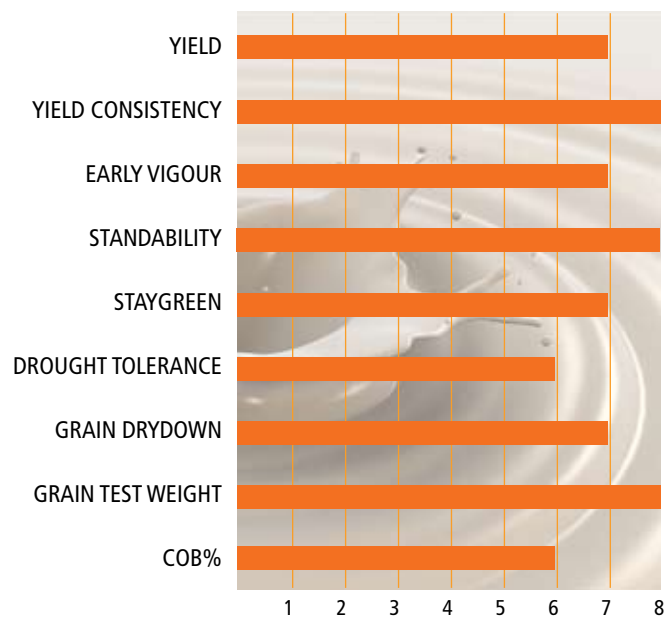

Key Strengths:

- Excellent yield potential.
- Excellent emergence and seedling growth.
- Very good roots and stalks.
- Excellent dry-down with very good test weight.

Management Tips:

- Good choice for early planting and reduced tillage systems..
- Plant at medium to high plant populations.
- 90,000-100,000 seeds/ha.
- Works well across various soil types.
- Root and stalk quality will allow for additional field drying prior to harvest.

AGRONOMIC TRAITS

Light area indicates optimum growing region.
