

PACIFIC SEEDS

Hycorn[®] 424

Light area indicates optimum growing region.

112 CRM SILAGE ONLY

Hycorn 424 is a silage only option with cobs 20 kernels round offering excellent cob to stover ratios. Outstanding stay-green, well suited to Northland, Bay of Plenty and early Waikato planting with excellent cool site emergence.

HYCORN 424 SILAGE ONLY

Hycorn 424 is an excellent longer season variety specific for silage, giving improved yields and at the same time providing outstanding cob to stover ratio, a feature not noted in many longer maturing silage specific hybrids.

In a side by side trial with a competitor variety, Hycorn 424 matched the dry matter yield at 24t/ha and its outstanding feature was the cob to stover ratio.

Pacific Seeds Territory Manager Barry Smallridge said Hycorn 424 produced an amazing amount of leafy forage, giving excellent ground shading that assisted with weed control and moisture retention.

"During the last season we undertook independent trials to determine the hybrid best suited to our local environment. Trialling included Hycorn 424, which is a longer season variety from Pacific Seeds, and it came out well on top. Not a tall plant, but with cobs 20 round, we were able to provide our customers with both quantity and and high quality feed".
