

Hycorn[®] 504

Light area indicates optimum growing region.

95-97 CRM SILAGE & GRAIN

Hycorn 504 is a new generation dual purpose hybrid that has returned excellent results from both independent and research trial data.

Hycorn 504 is vigorous at establishment and has a very good resistance to diseases. It is a light green leafy plant that maintains good leaf quality and staygreen.

A large dense plant at maturity with outstanding stalk strength, providing a silage option for regions where mid-season maturity performs best.

Low placement of the ear assists with standability and large starch type kernels feature on an agronomic map, placing 504 as a serious dual option hybrid.

HYCORN 504

Hycorn 504, at under 100 CRM, will deliver outstanding yield potential for both grain and silage.

The outcome of six trials independently collated by Seed Solutions showed Hycorn 504 truly deserving selection as Pacific Seeds' first new generation bred hybrid for New Zealand conditions.

Hycorn 504 will provide excellent all round agronomics and a broad adaptation across environments.

Recommendations:

90,000 plants per hectare for both silage and grain.
