

## 107 CRM SILAGE ONLY

Hycorn 533 is another in the range of new generation hybrids bred by Pacific Seeds. A mid to late season hybrid, it has delivered superior performance during field trials and hits the ground running with fast establishment. Demonstrating excellent early vigour, it will provide excellent yields in environments where moisture is minimal and heat units are high.

During last season Waikato crops of Hycorn 533 were subjected to major climatic extremes and still produced cob weights that exceeded the weight of the stover. In Northland, despite being subjected to above average moisture, crops of Hycorn 533 showed excellent resistance to leaf disease. This demonstrates the strong agronomic features of this hybrid and its ability to perform across a wide range of environmental conditions.

### HYCORN 533 SILAGE ONLY

#### Recommendations:

Sow at 85,000-90,000 seeds/ha.

 **Hycorn<sup>®</sup> 533**

Light area indicates optimum growing region.
